

Section A: Sexual Reproduction in Flowering Plants

MCQs (30 Questions)

1. Which part of the flower produces male gametes?
2. The female gamete in flowering plants is called:
3. Double fertilization occurs in:
4. The pollen tube develops from:
5. The ovule is attached to the ovary by the:
6. Which of the following is a dioecious plant?
7. Self-pollination occurs when:
8. Cross-pollination requires:
9. Fertilization leads to the formation of:
10. Endosperm is:
11. The male gametophyte in angiosperms is:
12. The female gametophyte is also called:
13. The function of the style is:
14. The opening in the ovule through which pollen enters is:
15. Wind-pollinated flowers usually have:
16. Animal-pollinated flowers are generally:
17. Which hormone regulates fruit development?
18. Seeds are formed from:
19. Ovary develops into:
20. The micropyle in the ovule allows:
21. In double fertilization, one sperm fuses with:
22. The other sperm fuses with:
23. Fertilized ovule forms:
24. Male gametes are produced in:
25. The structure that carries pollen from anther to stigma is:
26. Cross-pollination promotes:
27. Self-pollination leads to:
28. Pollen grains are released from:
29. Seed dispersal is essential for:
30. Apomixis is:

Short-Answer Questions (20 Questions)

1. Define pollination.
2. Differentiate between self-pollination and cross-pollination.
3. What is fertilization in flowering plants?
4. Explain double fertilization.
5. Describe the structure of a pollen grain.

6. Write the functions of the ovary, style, and stigma.
7. Differentiate between monoecious and dioecious plants.
8. Explain the development of male gametophyte.
9. Explain the development of female gametophyte.
10. Define endosperm and its types.
11. Explain the role of pollen tube in fertilization.
12. Describe the structure of an ovule.
13. What is apomixis? Give an example.
14. Mention any two agents of pollination.
15. Define seed dispersal and mention its types.
16. Explain parthenocarpy with examples.
17. Distinguish between epigeal and hypogeal germination.
18. Describe any two adaptations for pollination.
19. Explain the significance of fertilization in plants.
20. Give two differences between sexual and asexual reproduction.

Long-Answer / Diagram-Based Questions (15 Questions)

1. Draw and label the structure of a flower showing reproductive organs.
2. Describe the process of pollination in flowers.
3. Explain double fertilization with a diagram.
4. Describe the structure of a mature male gametophyte.
5. Explain the development of female gametophyte with a diagram.
6. Explain different types of pollination with examples.
7. Draw and label an ovule and its parts.
8. Explain post-fertilization changes in a flower.
9. Describe seed formation and structure of a mature seed.
10. Draw and explain the pollen tube growth.
11. Explain the differences between cross- and self-pollination in tabular form.
12. Diagrammatically show the process of fertilization.
13. Describe apomixis and vegetative propagation.
14. Explain seed dispersal and germination with diagrams.
15. Explain the significance of sexual reproduction in plants.

Section B: Human Reproduction

MCQs (30 Questions)

1. The male reproductive organ is called:
2. The female reproductive organ is called:
3. Sperms are produced in:

4. Egg is released from:
5. Fertilization usually occurs in:
6. Male gametes are:
7. Female gametes are:
8. Which hormone triggers ovulation?
9. Menstruation occurs due to:
10. The site of implantation of zygote is:
11. Testosterone is produced in:
12. Progesterone is secreted by:
13. The functional unit of the testes is:
14. Sperm matures in:
15. Semen contains:
16. Ovary produces:
17. The duration of the human menstrual cycle is:
18. Zygote divides to form:
19. Fertilized egg develops into:
20. The placenta connects:
21. The umbilical cord contains:
22. Fetus is protected by:
23. Lactation is controlled by:
24. Vasectomy is:
25. Oogenesis occurs in:
26. Spermatogenesis occurs in:
27. Fertilization leads to the formation of:
28. Embryo implantation occurs in:
29. The hormone responsible for milk ejection is:
30. Puberty is initiated by:

Short-Answer Questions (20 Questions)

1. Define human reproduction.
2. Differentiate between spermatogenesis and oogenesis.
3. Explain the menstrual cycle.
4. Define fertilization.
5. Describe the male reproductive system.
6. Describe the female reproductive system.
7. Define zygote, embryo, and fetus.
8. Explain the role of hormones in reproduction.
9. What is placenta? Write its functions.
10. What is puberty?
11. Explain the process of implantation.

12. Describe the structure of sperm.
13. Describe the structure of ovum.
14. Define gestation and its period.
15. Explain parturition (childbirth).
16. Explain lactation.
17. Explain the role of testosterone.
18. Explain the role of estrogen.
19. Describe the process of fertilization in humans.
20. Define twins and their types.

Long-Answer / Diagram-Based Questions (15 Questions)

1. Draw and label the male reproductive system.
2. Draw and label the female reproductive system.
3. Explain spermatogenesis with a diagram.
4. Explain oogenesis with a diagram.
5. Explain the menstrual cycle with a flow diagram.
6. Draw and explain fertilization process in humans.
7. Draw and label a placenta and umbilical cord.
8. Explain the stages of embryonic development.
9. Explain gestation and changes during pregnancy.
10. Describe the role of hormones in human reproduction.
11. Explain parturition with diagram.
12. Draw a labeled diagram of sperm and ovum.
13. Explain the process of implantation with diagram.
14. Draw and describe development of zygote to embryo.
15. Compare male and female reproductive systems in tabular form.

Section C: Reproductive Health

MCQs (25 Questions)

1. Contraception means:
2. Barrier methods of contraception include:
3. Oral contraceptive pills contain:
4. IUD is placed in:
5. Condom prevents:
6. Sterilization in males is called:
7. Sterilization in females is called:
8. Infertility is:
9. STDs are transmitted through:

10. HIV causes:
11. Syphilis is caused by:
12. Gonorrhea affects:
13. Chlamydia is a:
14. Methods of natural contraception include:
15. Rhythm method is based on:
16. Emergency contraceptive pills are effective within:
17. Condoms protect against:
18. Hormonal methods prevent:
19. AIDS is caused by:
20. HPV infection can lead to:
21. Male sterilization involves:
22. Female sterilization involves:
23. Infertility may be due to:
24. Preventive measures for reproductive health include:
25. Safe sex practices help prevent:

Short-Answer Questions (15 Questions)

1. Define reproductive health.
2. Explain the importance of family planning.
3. Differentiate between temporary and permanent contraceptive methods.
4. Explain barrier methods of contraception.
5. Explain hormonal methods of contraception.
6. Explain natural methods of contraception.
7. Explain sterilization methods.
8. Define infertility and its causes.
9. Describe HIV/AIDS transmission and prevention.
10. Describe common STDs and their prevention.
11. Explain the importance of safe sex.
12. Describe emergency contraception.
13. Explain the role of education in reproductive health.
14. Explain the significance of prenatal care.
15. Explain the social and ethical issues related to reproductive health.

Long-Answer / Case-Based Questions (10 Questions)

1. Discuss various contraceptive methods with advantages and disadvantages.
2. Explain the causes, symptoms, and prevention of HIV/AIDS.
3. Describe infertility and the medical interventions available.
4. Discuss the role of government programs in reproductive health.

5. Explain the prevention of STDs.
6. Describe the importance of menstrual hygiene.
7. Explain the social, ethical, and medical aspects of family planning.
8. Discuss natural vs. modern contraceptive methods.
9. Explain emergency contraception and its mechanism.
10. Case study: A couple is unable to conceive for 2 years. Suggest possible reasons and treatments.
